3/05/2025

Miller Well Drilling maintained the well at the above location. The well was drilled in 2008. The depth is 200 ft, and the pump is installed at 190 ft. The yield at the time of drilling was 6 GPM. The last service call was completed on 11/11/2024. During that inspection all the well equipment was in good working order. The water quality has been tested several times throughout the years and is very good. The iron level is (0) and PH level is (7).

Thank you!
