

A wide-angle photograph of the Boston skyline at dusk. The sky is a mix of blue and purple, with some clouds. The city lights are on, reflecting in the water. In the foreground, there's a wooden post in the water. The skyline includes several tall buildings, some with distinctive shapes like the cylindrical ones.

GLOSSARY OF TERMS

Average Price Per Foot

The average price per square foot cost is computed by adding the square foot cost of each home that has sold in an area and dividing by the number of homes sold.

Average Sales Price

The average sales price is computed by taking the total sales dollar volume for the area and dividing it by the total transactions.

Average Sales Price vs List Price

The average sales vs list price is computed by finding the difference between all the listing and sales prices and then dividing by the number of sales.

Average DOM

Average days on market is computed by taking the total number of days for each listing before it went pending and dividing by the total number of listings.

Total Dollar Volume Sold

Total dollar volume sold is computed by adding the sales price of every listing together during a certain time period.

Total Transactions

The total transactions for a period are the number of listings that transferred ownership in that area.

Approximate Absorption Rate

The absorption rate is the percentage of current on market listings which should sell over the next month. It is calculated by dividing the average number of homes sold per month by the total number of active listings. (The average number of homes sold per month is calculated by taking the total number of homes sold over the past 12 months and dividing it by 12).

Approximate Months Inventory Supply

Approximate months inventory supply is the number of months it would take to sell the current active inventory. It is computed by dividing the active listings on a certain date by the average number of homes sold in a month (The average number of homes sold per month is calculated by taking the total number of homes sold over the past 12 months and dividing it by 12).

Total Number of Units Listed

The total number of units listed is the number of listings that went active during the time period.

NOTES

Does Seasonality Impact Quarterly Reports?

Depending on the weather, the spring market generally runs from early March through Memorial Day in May. The Fall market generally begins after Labor Day and goes through the end of October or early November. What this means is that we will see a larger amount of closed sales volume in 0z and 03 vs. 01 and 04.

Do Closings in New Developments Impact Quarterly Reports?

When a new development is completed, we often see large amounts of closings happen in a short period of time. This can dramatically skew the quarterly market statistics for a particular neighborhood. With that said, there are also cases where new construction units were never listed on MLS and therefore don't show up in the report.

Does Sample Size Impact Quarterly Reports?

Certain neighborhoods with lower market activity may see significant variations from one report to the next due to the small sample size.

What is Included in Downtown Neighborhoods?

In order to prevent extremely small sample sizes and eliminate a real estate agent's subjective choice of which neighborhood to include their listing on MLSpin in, we've combined five areas into one neighborhood called Downtown. These areas include any properties listed in Chinatown, Faneuil, Financial District, Leather District, Midtown, and the Theatre District.
