01 Market Dashboard | Manhattan

Executive Summary

The first quarter of 2025 marked a strong start to the year for Manhattan’s new development market, with clear signs of renewed momentum across several segments. Contract activity rose 6% year-over-year, with approximately \$1.87 billion in signed contracts—a 10% increase from Q1 2024 and one of the highest Q1 totals recorded in the past eight years. This growth was fueled by a resurgence of interest in both mid-market and ultra-luxury product, signaling buyer confidence despite broader economic headwinds.

A standout feature of the quarter was the strength of the high-end market. There were 21 transactions priced above \$15 million, including 12 above \$20 million, marking the third consecutive quarter in which sales over \$10 million comprised at least 8% of all signed contracts. This performance underscores the resilience of the ultra-luxury segment, which remains dominated by cash buyers and is relatively insulated from fluctuations in borrowing costs. However, some of this strength was driven by legacy inventory at developments like 111 West 57th Street, where prices were significantly adjusted after nearly a decade on the market.

The median price of signed contracts climbed to \$2.75 million in Q1, up 18% from last year’s first quarter and matching Q4 2024. This is one of the highest median prices recorded over the past three years. Meanwhile, the median price per square foot (PPSF) for contracts signed in Q1 dropped below \$2,100 for the first time in four quarters, landing at \$2,025. With only 23% of these deals closed, the final recorded PPSF may decline further. This indicates growing segmentation within the market, where headline prices remain elevated, but relative value remains critical for buyers.

Manhattan’s unsold new development inventory dropped 14% year-over-year, reaching 4,066 units—a 10-year low. This reflects ongoing absorption, with nearly 45% of the remaining inventory dating back to pre-pandemic launches. Despite the decline in total units, the median PPSF of unsold inventory rose 3% to \$2,392, highlighting a notable 18% gap compared to the median PPSF of signed contracts. This pricing disconnect underscores the importance of realistic, demand-driven pricing strategies.

Manhattan’s new development market has tightened considerably in terms of supply pacing. Based on contract activity over the past 12 months, the market now holds 2.4 years of supply, its lowest level in ten quarters. This strongly indicates improved absorption and suggests that buyer activity aligns more closely with the available product while headwinds persist.

One- and two-bedroom units remain the backbone of the new development market, accounting for nearly 60% of all transactions over the past year. Similarly, properties priced below \$4 million represent close to 70% of total activity, reflecting ongoing demand for smaller, more accessible units.

Yet beneath these headline figures lies a more nuanced story. One-bedroom units priced above \$3 million have over seven years of supply, compared to just 2.5 years for the overall category. Two-bedroom homes priced between \$5 and \$7 million demonstrate a similar trend, with more than five years of supply versus only 2.2 years across the broader category. These disparities indicate persistent imbalances at the upper end of the mid-market, where supply continues to outpace absorption. Sellers in these segments must adopt more targeted pricing strategies and focused marketing approaches to drive renewed interest. Agility will be key to managing absorption and ensuring long-term viability across all product types.

A notable trend in Q1 was the geographic shift in buyer activity. Uptown markets experienced renewed strength, with the Upper West Side and Midtown showing significant gains. Sales below 34th Street accounted for just 45% of all contracts signed—a 10% decline year-over-year and a strong indication of rebalancing across submarkets.

The Upper West Side, which had previously underperformed, demonstrated impressive growth. Projects such as The Astor, 720 West End Avenue, and 212 West 72nd Street saw renewed buyer interest by aligning asking prices more closely with market expectations while offering a compelling blend of prewar charm and modern upgrades. With few large-scale developments currently in the pipeline, this submarket’s constrained inventory added urgency to buyer decision-making, helping to accelerate absorption and reestablish the Upper West Side as a competitive player in the broader market.

On the other hand, Downtown East experienced a 30% decrease in contract activity, primarily due to slowdowns in Gramercy Park and Kips Bay. However, this reduction likely indicates limited inventory rather than a decline in overall demand. These neighborhoods are highly developed, and many of the available units have already been sold.

The first quarter featured the introduction of six new development projects totaling 245 units—a 16% increase from Q1 2024. The launch of 80 Clarkson Street, which brought 113 units to market, was among the most anticipated of the quarter and contributed significantly to the overall volume.

Looking ahead, we expect the pace of new launches in 2025 to track closely with the prior year. However, the outlook beyond remains fluid. Rising interest rates, heightened construction costs, and continued supply chain volatility are all exerting pressure on development timelines and budgets. In some cases, these headwinds may render projects financially unviable, prompting delays, redesigns, or reconsideration altogether.

YOY Δ	Q1 2025	
CONTRACTS SIGNED		
6%	415	In Q1 2025, 415 contracts were signed, reflecting a 6% increase from the same period in the previous year.
DOLLAR VOLUME		
10%	\$1.87 B	The total dollar volume of contracts signed in Q1 2025 reached \$1.87 billion, indicating a 10% increase from the previous year.
MEDIAN PRICE PER SQUARE FOOT		
1%	\$2,025	The median price per square foot for contracts signed in Q1 2025 rose by 1% year-over-year, reaching \$2,025 per square foot
MEDIAN PRICE		
18%	\$2.75 M	The median price for Q1 was \$2.75 million, an 18% increase compared to the previous year.
INVENTORY		
-14%	4,066	Manhattan’s unsold new development inventory decreased by 14% year over year, totaling 4,066 units. This represents the lowest inventory level since 2015.
LAUNCHES & PIPELINE		
16%	245	A total of 245 new units were released for sale in Q1, marking a 16% year-over-year increase.

02 Contracts Signed by Quarter | Manhattan

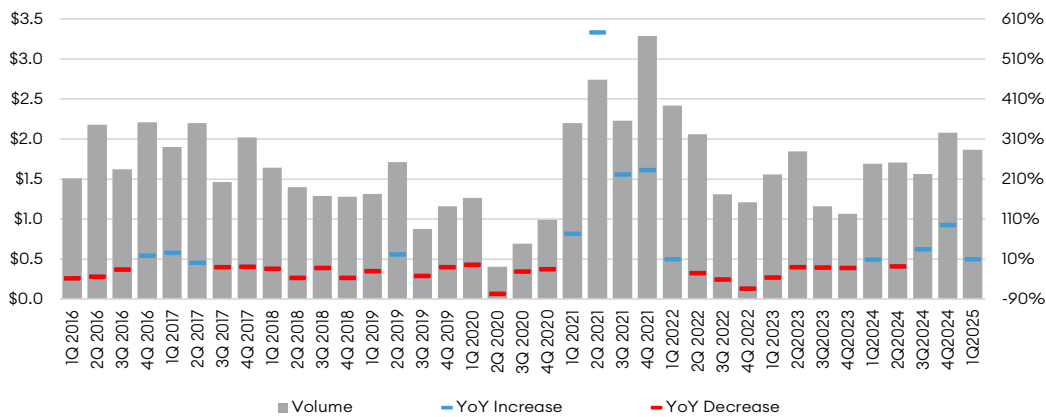

Contracts Signed by Quarter | Number | Volume

In the first quarter of 2025, contract activity rose by 6% to 415 signed contracts, compared to the same period in 2024. Contracts signed in Q1 2025 totaled approximately \$1.87 billion, marking a 10% year-over-year increase. Due to numerous high-value transactions, including 21 priced over \$15 million, this is only the third time sales have exceeded \$1.8 billion in the first quarter in the last 8 years.

03 Median Price per Square Foot & Price by Quarter | Manhattan

Median Price Per Square Foot & Median Price by Quarter

In Q1 2025, the median price per square foot for signed contracts reached \$2,025, marking the first time in the last four quarters that the price per square foot has fallen below \$2,100. However, with only 23% of these contracts closed, this figure may decrease further as more sales are recorded. Additionally, the median price of signed contracts rose 18% from Q1 2024 to \$2.75 million but remained the same as Q4 2024, among the highest median prices in the past three years.

04 Unsold Inventory by Quarter | Manhattan

Unsold Inventory by Quarter | Number | Median PPSF

Manhattan’s unsold new development inventory dropped 14% year-over-year, reaching a 10-year low of 4,066 units at the end of Q1. Nearly 45% of these unsold units originated from projects launched before the pandemic. In Q1 2025, the price per square foot of unsold inventory rose by 3%, reaching \$2,392—the highest median price per square foot for unsold units- creating an 18% disparity between the median price per square foot of sold and unsold inventory.

05 Years of Supply by Quarter | Manhattan

Unsold Inventory vs. Rolling Last Twelve Months (RLTM) Contracts Signed

At the end of Q1 2025, Manhattan’s new development inventory totaled 4,066 unsold units. Analyzing contract activity over the past twelve months, the supply metric for Manhattan’s new development market has tightened to 2.4 years, marking its lowest level in ten quarters. This decline highlights steady inventory absorption, reflecting increased demand for a specific product type.

06 Contracts Signed & Unsold Inventory by Type & Price | Manhattan

Contracts Signed | Unit Type & Price

In the last four quarters, the new development market shows the strongest demand for one-bedroom and two-bedroom types, representing nearly 60% of all transactions. Properties priced below \$4 million account for almost 70% of total activity. These segments drive most transactions, underscoring the strong demand for more accessible price points and smaller unit types. While overall trends in Q1 were generally consistent with the same period last year, there was a marked uptick in activity at the ultra-luxury end of the market, with nine sales between \$15-\$20 million and twelve sales above \$20 million, both notably higher than in many prior quarters. This is the third consecutive quarter in which sales over \$10 million accounted for at least 8% of signed contracts, the last time was in 2021. At first glance, this may suggest strong momentum at the top end; however, it's important to note that several of these transactions occurred at 111 West 57th Street, where pricing was significantly adjusted after nearly a decade on the market. Notably, activity in this segment appears less impacted by borrowing costs, as most purchases are cash-based.

Although smaller, lower-priced units continue to account for the bulk of transactions, a closer look at the data reveals a more complex story that presents challenges and opportunities. For example, while one-bedrooms overall have a manageable 2.5 years of supply, that figure balloons to more than seven years for those priced above \$3 million. A similar pattern emerges with two-bedroom units: the general supply sits at just 2.2 years but jumps to over five years for units in the \$5 to \$7 million range. These disparities reflect a fragmented market where buyer demand is influenced by price sensitivity, location, and product type. To remain competitive, developers and sellers must adopt data-driven strategies that align with current demand and address oversupply in slower-moving segments. Agility in pricing and positioning will be crucial to drive absorption and sustain market momentum.

07 Contracts Signed & Unsold Inventory | by Submarket

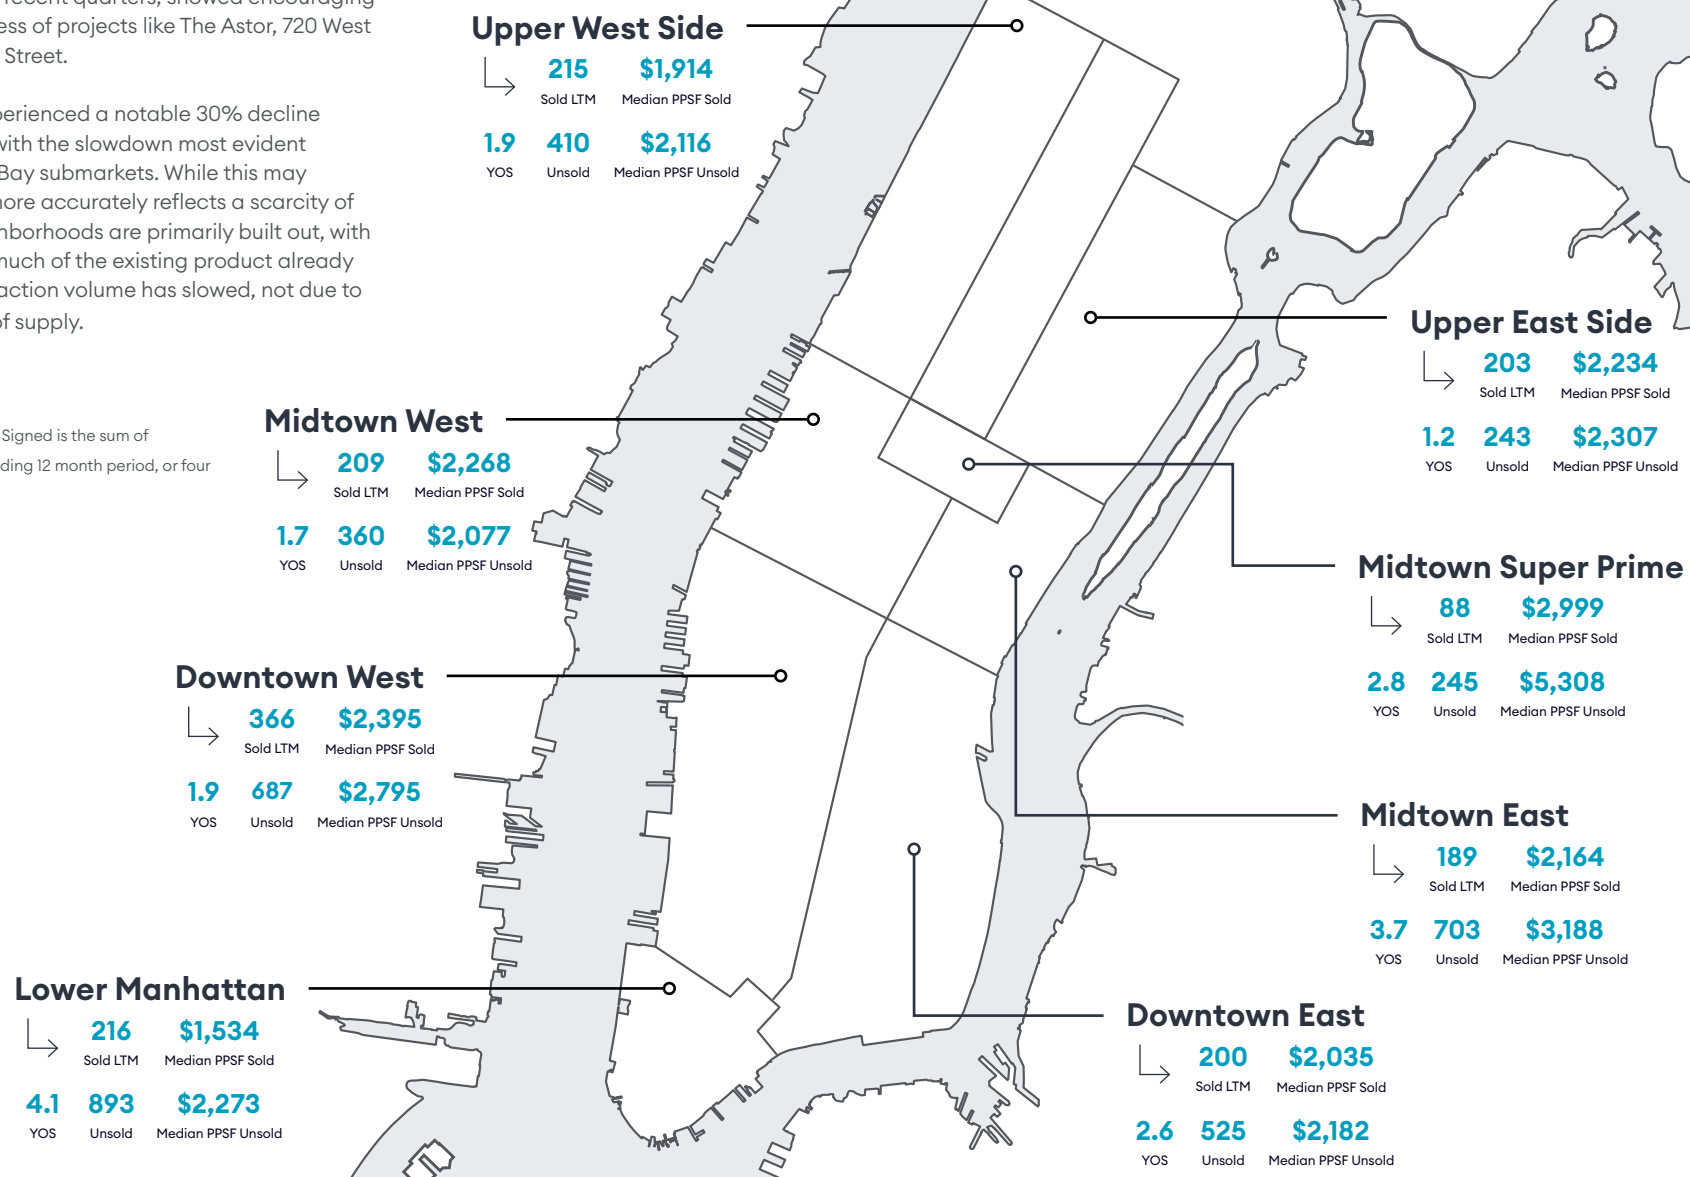

RLTM Contracts Signed & Unsold Inventory

In the first quarter of 2025, buyer interest noticeably shifted uptown, with the Upper West Side and Midtown experiencing a strong resurgence in demand compared to Q1 2024. Sales below 34th Street accounted for just 45% of all contracts signed—a 10% drop year-over-year, marking a meaningful rebalancing in market activity. The Upper West Side, which had lagged in recent quarters, showed encouraging momentum, driven by the success of projects like The Astor, 720 West End Avenue, and 212 West 72nd Street.

Meanwhile, Downtown East experienced a notable 30% decline in sales compared to Q1 2024, with the slowdown most evident in the Gramercy Park and Kips Bay submarkets. While this may suggest softening demand, it more accurately reflects a scarcity of available inventory. These neighborhoods are primarily built out, with limited new development and much of the existing product already absorbed. Consequently, transaction volume has slowed, not due to a lack of interest but to a lack of supply.

Note: Last Twelve Months (LTM) Contracts Signed is the sum of contracts signed in the immediately preceding 12 month period, or four quarters, to the date of this report.

08 Historical Launches & Pipeline | Manhattan

Units Launched For Sales | Pipeline

During the first quarter of 2025, six new development projects introduced 245 units to the market, representing a 16% year-over-year increase. A major contributor was the debut of 80 Clarkson Street, which brought 113 units to market and captured significant attention. As the year progresses, we expect the overall pace of launches to mirror 2024, though the outlook beyond remains less predictable. Volatility in interest rates and ongoing trade and supply chain disruptions have the potential to impact construction costs significantly. For some projects, these rising expenses may challenge financial viability, potentially prompting delays, redesigns, or even shelved plans as developers reassess feasibility in light of shifting economic conditions.

Historical & Forecasted Units Launched for Sales

09 Methodology & Disclaimers

Methodology

- Data in this report includes sponsor units only in Manhattan south of 96th Street on the Upper East Side, and south of 110th Street on the Upper West Side.
- Data as of April 1, 2025.
- Source: Douglas Elliman Proprietary Databases, ACRIS, StreetEasy, NY State Attorney General, and other public sources.
- Unsold Inventory is defined as Schedule A units not sold, plus potentially signed contracts not publicly reported. 220 Central Park South is excluded from inventory figures.
- Rolling Last Twelve Months (RLTM) Contracts Signed is defined as the sum of contracts signed in the immediately preceding 12 month period, or four quarters, to the date of this report.
- Contract signed prices may not take into account any variety of concessions or taxes. Units sold below market rate are included in contracts signed totals but excluded from price calculations.
- Some new developments in sales do not disclose all individual contract signed activity, and therefore contract signed data included in this report may be partial or estimated. Once units close, past quarters' data is revised to reflect actual historical sales.
- The information compiled by Douglas Elliman Development Marketing is produced and processed from sources believed to be reliable. 01 Market Dashboard | Manhattan

Executive Summary

In 2024, Manhattan's new development market showcased a complex balance of supply dynamics, buyer demand, and evolving market preferences, culminating in an exceptionally strong fourth quarter. This period set benchmarks for both transaction volume and total dollar value, highlighting the market's capacity to adapt to shifting economic conditions and buyer priorities. The year's performance underscores Manhattan's new development sector's enduring strength and strategic evolution.

The fourth quarter of 2024 emerged as a standout period, with contract activity rising by 51% year-over-year and 10% quarter-over-quarter. While the second quarter led in terms of total units sold, Q4 achieved the highest dollar volume of the year, surpassing \$2 billion for the first time since Q2 2022. This represents a staggering 90% year-over-year increase, fueled by a surge in high-value transactions. Notably, 39 deals exceeded \$10 million, with 13 surpassing \$20 million—a significant leap from the eight transactions in Q3 above \$20 million.

These figures reflect renewed confidence among affluent buyers, possibly bolstered by favorable economic conditions, portfolio diversification strategies, and the appeal of Manhattan's luxury market as a stable investment avenue. This heightened activity at the ultra-high-end also signals a return to pre-pandemic patterns, when Manhattan's elite properties consistently commanded outsized demand.

The median price per square foot for contracts signed in Q4 climbed to \$2,184, the highest since Q4 2021 and a 9% year-over-year increase. However, as only 26% of these contracts had closed by year-end, this figure is expected to moderate as additional units close. A similar trend occurred in Q3, where the final median price per square foot declined by \$36 (-17%) once all sales were recorded.

The median price of signed contracts in Q4 reached a 12-quarter high of \$2.89 million. This upward trajectory underscores the growing preference for premium units, driven by buyer demand for high-quality finishes, prime locations, and enhanced amenities.

Manhattan's unsold new development inventory reached a 10-year low at the end of Q4, with 4,214 units—an 11% year-over-year decline. Interestingly, nearly 45% of this inventory stems from pre-pandemic projects, highlighting the enduring impact of older stock on supply dynamics.

The absorption rate tightened significantly, with new development inventory equating to 2.6 years of supply, the lowest level in nine quarters. This shift points to a steady balance between demand and inventory. However, the 9% premium in the median price per square foot of unsold inventory versus sold units indicates that pricing strategies need fine-tuning to maximize absorption in specific segments.

In 2024, smaller units (two bedrooms or fewer) and properties priced below \$4 million dominated activity, representing 70% of total transactions. Yet, significant growth in the luxury segment marked a significant departure from earlier trends. Sales above \$20 million rose by 63% in Q4 compared to Q3, while transactions in the \$5 million to \$7 million range increased by 67%. These shifts suggest renewed activity among affluent buyers, likely influenced by strategic pricing and market stabilization.

Conversely, one-bedroom units priced between \$2 million and \$3 million faced an oversupply, with 3.5 years of inventory. This imbalance highlights the importance of aligning supply with prevailing buyer preferences and underscores the need for strategic pricing adjustments to address slower absorption in specific segments.

Demand for Downtown projects remained strong, with neighborhoods like West Chelsea and the Financial District driving activity. Sales below 34th Street accounted for nearly 50% of all contracts signed in 2024, reaffirming Downtown's position as a preferred location for buyers seeking a blend of lifestyle amenities, cultural attractions, and accessibility.

The Upper East Side and Downtown West saw the most significant sales growth in Q4, reflecting the appeal of these neighborhoods to diverse buyer profiles. The Upper East Side's enduring stability attracts families and long-term investors, while Downtown West's dynamic urban environment appeals to younger professionals and those seeking a vibrant lifestyle.

In contrast, Midtown West experienced a steep 38% decline in sales from Q3 to Q4, signaling potential saturation or waning buyer interest. The area's challenges underscore the importance of differentiation and enhanced amenities to compete with more established or emerging neighborhoods.

Developers launched 30 new units across three projects in Q4, contributing to 1,120 units for the year—a 16% increase from 2023. Launching projects closer to occupancy dates gained traction, reflecting a shift toward strategies that minimize market exposure and optimize absorption rates. However, a few high-profile developments are expected to break this pattern in 2025, such as 262 Fifth Avenue and 80 Clarkson Street, potentially signaling renewed confidence in Manhattan's long-term market potential.

Manhattan's new development market in 2024 was defined by its ability to adapt to shifting buyer preferences. It was marked by strong demand for smaller units, a resurgence of ultra-luxury sales, and tightening inventory levels. The robust Q4 results underscore the enduring appeal of Manhattan's real estate as a stable and lucrative investment, particularly in premium segments.

However, emerging imbalances in specific unit types and submarkets indicate the need for continued strategic alignment. To navigate these dynamics effectively, developers must prioritize data-driven pricing, targeted marketing, and thoughtful project positioning. As Manhattan's real estate market moves into 2025, its resilience will hinge on the ability to innovate and respond to an increasingly discerning and segmented buyer base.

YOY Δ	Q4 2024	
CONTRACTS SIGNED		
51%	424	In Q4 2024, 424 contracts were signed, a 51% increase from the same period in the previous year.
DOLLAR VOLUME		
90%	\$2.05 B	The total dollar volume of contracts signed in Q4 2024 amounted to \$2.05 billion, a 90% increase from the previous year.

02 Contracts Signed by Quarter | Manhattan

Contracts Signed by Quarter | Number

In the fourth quarter of 2024, contract activity rose by 51% compared to the same period in 2023 and by 10% from the third quarter of 2024. While the second quarter of 2024 outperformed the fourth in terms of units sold, the fourth quarter achieved the highest dollar volume of the year. Contracts signed in Q4 2024 totaled just over \$2 billion, marking a 90% year-over-year increase and the first time since Q2 2022 sales surpassed the \$2 billion threshold.

Contracts Signed by Quarter | Volume

This impressive dollar volume was fueled by numerous high-value transactions, including 39 deals exceeding \$10 million, of which 13 were over \$20 million.

03 Median Price per Square Foot & Price by Quarter | Manhattan

Median Price per Square Foot by Quarter

In Q4 2024, the median price per square foot for signed contracts reached \$2,184, marking a 9% year-over-year increase and the highest since Q4 2021. However, with only 26% of these contracts closed, this figure is expected to decrease as more sales are recorded. For instance, the price per square foot for signed units in Q3 dropped from \$2,182 to \$2,146 after additional units closed in Q4.

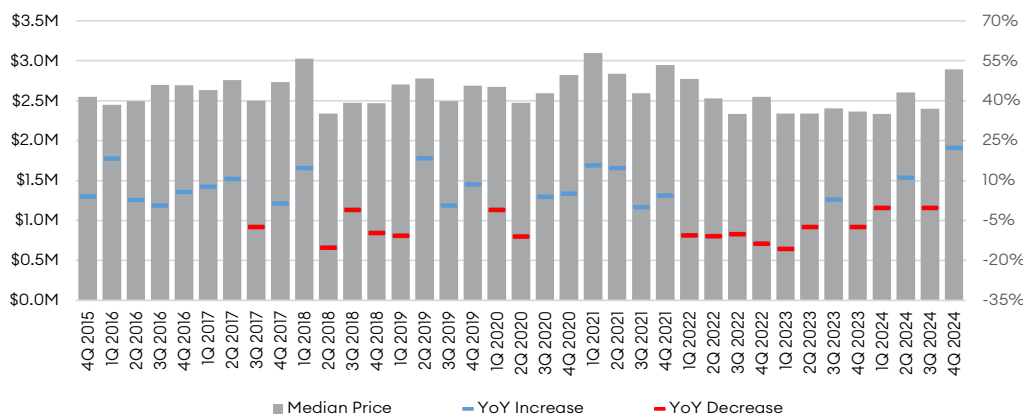

Median Price by Quarter

Additionally, the median price of signed contracts in Q4 climbed to \$2.89 million, the highest median price recorded in the past twelve quarters.

04 Unsold Inventory by Quarter | Manhattan

Unsold Inventory by Quarter | Number

Manhattan’s unsold new development inventory dropped by 11% year-over-year, reaching a 10-year low of 4,214 units at the end of Q4. Nearly 45% of these unsold units originated from projects launched before the pandemic.

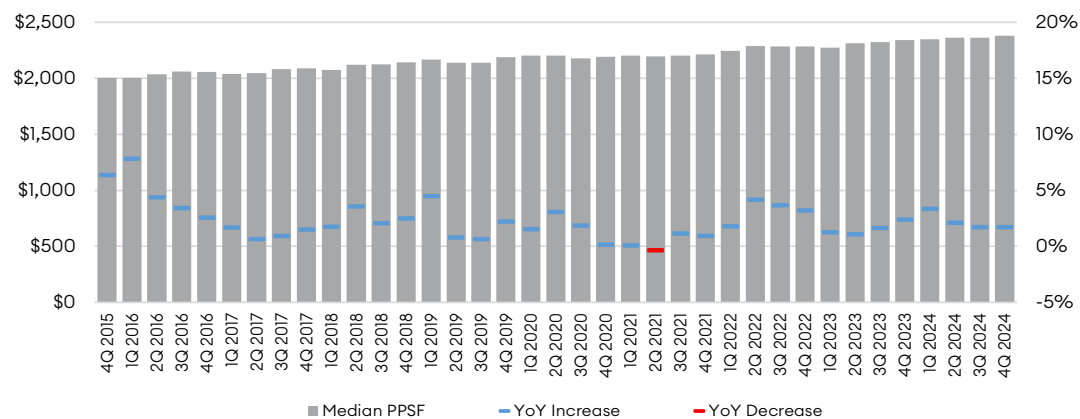

Unsold Inventory by Quarter | Median PPSF

In Q4 2024, the price per square foot of unsold inventory rose by 2%, reaching \$2,381—the highest median price per square foot for unsold units. This created a 9% disparity between the median price per square foot of sold and unsold inventory.

05 Years of Supply by Quarter | Manhattan

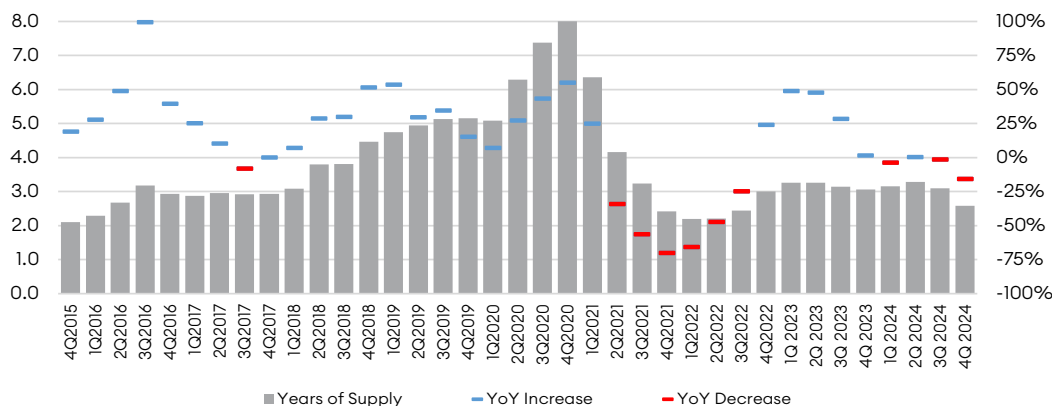

Unsold Inventory vs. Rolling Last Twelve Months (RLTM) Contracts Signed

At the end of Q4 2024, Manhattan's new development inventory totaled 4,214 unsold units. Analyzing contract activity over the past year, the supply metric for Manhattan's new development market has tightened to 2.6 years, marking its lowest level in nine quarters. This notable decline highlights a steady inventory absorption, reflecting heightened demand for a specific product type.

06 Contracts Signed & Unsold Inventory by Type & Price | Manhattan

Contracts Signed | Unit Type & Price

In 2024, the new development market demonstrated consistent patterns, with sales of two-bedroom units or smaller or properties priced below \$4 million accounting for approximately 70% of total activity. These segments continued to drive most transactions, underscoring a strong demand for more accessible price points and compact living spaces. However, while overall trends in Q4 mirrored those observed earlier in the year, notable deviations emerged in two specific price categories.

The luxury segment saw a marked uptick, with sales above \$20 million reaching 13 transactions in Q4, compared to just 8 in Q3—a significant 103% increase of dollar volume highlighting heightened activity at the ultra-high-end of the market. Similarly, the \$5 million to \$7 million price range experienced substantial growth, with sales surging to 45 units in Q4 from 27 in Q3, signaling robust demand in this upper-middle luxury tier. These shifts may reflect growing confidence among affluent buyers or strategic moves in response to evolving economic conditions.

Supply and demand dynamics further elucidate the market's underlying challenges and opportunities. Two-bedroom units priced under \$3 million continue to display a healthy balance, with less than two years of supply—an indicator of sustained buyer interest and limited inventory. In contrast, one-bedroom units priced between \$2 million and \$3 million face a significant oversupply, with inventory levels equating to 3.5 years of supply. This disparity highlights emerging market imbalances and underscores the importance of strategic pricing adjustments and targeted marketing to address sluggish absorption rates in specific segments.

These insights point to a nuanced market landscape where affordability, location, and product segmentation play pivotal roles. Developers and sellers must remain agile, leveraging data-driven strategies to align offerings with prevailing buyer preferences while proactively addressing areas of oversupply. Balancing these dynamics will be critical to sustaining market vitality and optimizing transaction volumes across all price points.

07 Contracts Signed & Unsold Inventory | by Submarket

RLTM Contracts Signed & Unsold Inventory

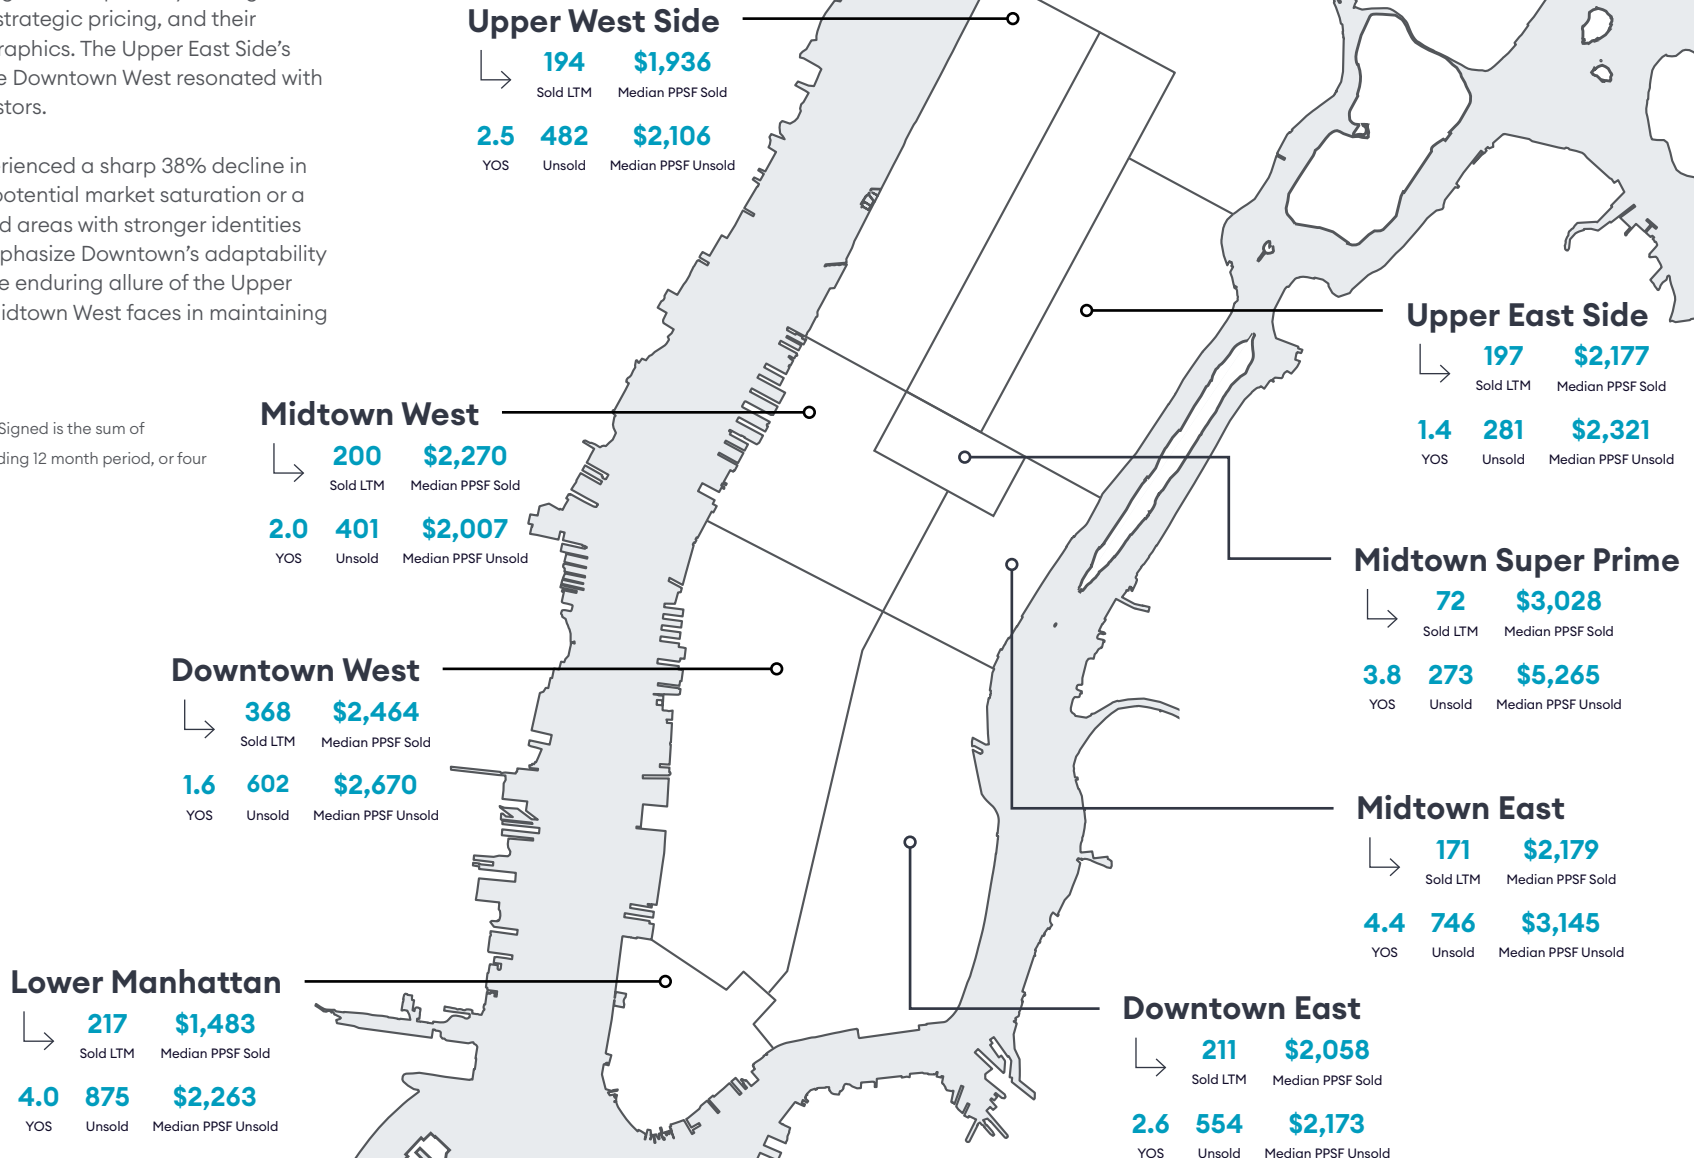

Demand for Downtown projects remained strong in 2024, with neighborhoods like West Chelsea and the Financial District leading the way. Sales below 34th Street accounted for nearly 50% of all contracts signed, reaffirming Downtown's dominance as a highly sought-after location. The Upper East Side and Downtown West saw the most significant quarterly sales growth in Q4, driven by new inventory, strategic pricing, and their appeal to diverse buyer demographics. The Upper East Side's stability attracted families, while Downtown West resonated with younger professionals and investors.

Conversely, Midtown West experienced a sharp 38% decline in sales from Q3 to Q4, signaling potential market saturation or a shift in buyer preferences toward areas with stronger identities and amenities. These trends emphasize Downtown's adaptability to changing buyer demands, the enduring allure of the Upper East Side, and the challenges Midtown West faces in maintaining relevance.

Note: Last Twelve Months (LTM) Contracts Signed is the sum of contracts signed in the immediately preceding 12 month period, or four quarters, to the date of this report.

08 Historical Launches & Pipeline | Manhattan

Units Launched For Sales | Pipeline

In Q4 2024, 30 units were released for sale across three new development projects, bringing the year's total to 1,120 units—a 16% increase from 2023. Looking ahead, we anticipate 2025 following a similar trajectory as 2024, though longer-term forecasts remain uncertain. Notably, sales strategies have continued to evolve, with many projects launching closer to their occupancy dates. While this approach is expected to dominate, a few larger, high-profile developments will likely break the pattern, initiating sales campaigns much earlier.

Historical & Forecasted Units Launched for Sales

09 Methodology & Disclaimers

Methodology

- Data in this report includes sponsor units only in Manhattan south of 96th Street on the Upper East Side, and south of 110th Street on the Upper West Side.
- Data as of January 1, 2025.
- Source: Douglas Elliman Proprietary Databases, ACRIS, StreetEasy, NY State Attorney General, and other public sources.
- Unsold Inventory is defined as Schedule A units not sold, plus potentially signed contracts not publicly reported. 220 Central Park South is excluded from inventory figures.
- Rolling Last Twelve Months (RLTM) Contracts Signed is defined as the sum of contracts signed in the immediately preceding 12 month period, or four quarters, to the date of this report.
- Contract signed prices may not take into account any variety of concessions or taxes. Units sold below market rate are included in contracts signed totals but excluded from price calculations.
- Some new developments in sales do not disclose all individual contract signed activity, and therefore contract signed data included in this report may be partial or estimated. Once units close, past quarters' data is revised to reflect actual historical sales.
- The information compiled by Douglas Elliman Development Marketing is produced and processed from sources believed to be reliable. Douglas Elliman Development Marketing makes no representations or warranties, express or implied, with respect to future market conditions or prices of residential product at the time the subject property or any competitive property is complete and ready for occupancy or with respect to any report, study, finding, recommendation or other information provided by Douglas Elliman Development Marketing herein. 01 Market Dashboard | Manhattan

Executive Summary

The third quarter of 2024 presents a multifaceted view of Manhattan's new development market, marked by subtle shifts reflecting resilience and adjustment. While the landscape is evolving, signs of underlying strength suggest the market is settling into a more stable and sustainable rhythm after several years of turbulence. Contract activity increased by 9% year-over-year this quarter yet decreased by 15% from the previous quarter. While this quarterly dip could raise some eyebrows, the broader trend tells a more optimistic story: one wherein contract volumes are more closely aligned with that of pre-pandemic seasonal patterns. Thus, the key takeaway shouldn't be the short-term decline but rather the steady return to historical norms, alluding to a more stable and sustainable market.

Notably, this quarter saw a 24% increase in the dollar volume of contracts signed year-over-year, driven primarily by an uptick in high-value deals. With sixteen transactions exceeding \$15 million, the top end of the market remains incredibly robust and reflects a continued appetite for luxury even as affordability and the demand for smaller, more accessible units dominate the broader market. This duality – strong demand at opposite ends of the price spectrum – highlights a bifurcated market in which first-time buyers and luxury seekers are active while the mid-market remains somewhat constrained.

Pricing trends further underscore this duality. The median price per square foot (PPSF) for signed contracts rose to \$2,182, marking a 6% increase from the previous year and reaching its highest point since 2021. Yet, it's important to note that only 24% of these contracts have closed. Once those sales are recorded, we can expect a downward adjustment, but the overall trajectory still points to upward pressure on prices, especially in the luxury segment. The median price of \$2.4 million for signed contracts remained steady, reflecting a market where sales below \$3 million continue to drive most transactions—62% of all contracts signed in Q3 were in this range.

Inventory tells another part of the story. Manhattan's unsold new development inventory declined by 6% year-over-year, ending the quarter with 4,574 units still available. A significant portion of this unsold inventory belongs to projects launched before the pandemic, suggesting that older inventory is experiencing slowing absorption rates as newer units continue to hit the market. Interestingly, the gap between the price per square foot of sold versus unsold inventory widened to 9%, indicating that developers may need to adjust pricing strategies to address this imbalance, particularly as unsold units are priced higher, on average, than those that have sold.

Another notable takeaway from this quarter is the continued strength of smaller units. Two-bedrooms and smaller residences accounted for 69% of all signed contracts, with sales below \$4 million making up 72% of the market. This trend, seen consistently throughout the year, highlights a shift in buyer preferences and the market's response to the demand for more affordable housing options. Concurrently, the luxury market is alive and well. Q3 saw nine sales above \$20 million and 32 sales above \$10 million, reinforcing that while smaller, more affordable units are moving quickly, the high end of the market remains active, with significant capital flowing into trophy properties.

Submarket performance also adds depth to the quarter's narrative. While Downtown Manhattan continued to capture most sales, particularly below 34th Street, some areas experienced a softening demand. Notably, West Chelsea, a key luxury submarket, saw slower absorption rates, which could signal an extended sales cycle for marquee projects like One High Line and The Cortland. In contrast, neighborhoods such as Kips Bay and Downtown East, which offer appealing price points, experienced notable increases in activity. This surge was partly driven by the success of the Hendrix House, where sales tripled compared to the prior quarter. This regional divergence suggests buyers are increasingly selective, seeking value in emerging or previously overlooked neighborhoods.

Looking forward, the market faces some key challenges and opportunities. Q3 saw the introduction of 371 new units, bringing the total new development launches for 2024 to 1,097—a 17% increase over the previous year. However, we anticipate a slowdown in new launches during Q4 as developers continue to adjust to market conditions and adopt strategies such as launching closer to occupancy. This more cautious approach may help balance supply and demand as we move into 2025, a year expected to mirror 2024 activity.

The overarching theme for Q3 2024 is one of recalibration. After years of turbulence, the market is finding its footing, with buyers and developers adjusting to new realities. There's a clear bifurcation in demand, with strong activity at both the affordable and luxury ends of the market, while the mid-market faces more pressure. Inventory is slowly being absorbed, but developers must remain flexible, particularly in pricing, to ensure unsold units don't linger. The coming quarters will be critical in determining whether these trends will solidify. However, the Manhattan new development market appears to be on a more stable, if still evolving, path.

YOY Δ	Q3 2024	
CONTRACTS SIGNED		
9%	371	In Q3 2024, 371 contracts were signed, a 9% increase from the same period in the previous year.
DOLLAR VOLUME		
24%	\$1.52 B	The total dollar volume of contracts signed in Q3 2024 amounted to \$1.52 billion, a 24% increase from the previous year.
MEDIAN PRICE PER SQUARE FOOT		
6%	\$2,182	The median price per square foot for contracts signed in Q3 2024 increased 6% year-over-year, to \$2,182 per square foot.
MEDIAN PRICE		
0%	\$2.40 M	The median contract price for this quarter was \$2.4 million, no change compared to the previous year.
INVENTORY		
-6%	4,574	Manhattan's unsold new development inventory decreased 6% year over year to 4,574 units. This marks the lowest inventory level since 2015 but only a modest decline from the previous quarter.
LAUNCHES & PIPELINE		
17%	1,097	1,097 new units were released for sale in 2024, a 17% increase from the previous year.

02 Contracts Signed by Quarter | Manhattan

Contracts Signed by Quarter | Number

In the third quarter of 2024, contract activity increased by 9% compared to the previous year but dropped by 15% from the second quarter. However, the number of contracts signed in the quarter was very much in line with the third quarter of the four years preceding the 2020 pandemic.

Contracts Signed by Quarter | Volume

The dollar volume of contracts signed in Q3 2024 rose by a significant 24% year-over-year. The higher dollar volume was driven by several high-value sales, with sixteen transactions above \$15 million compared to twelve in the second quarter. Year to date, sales volume is up by nearly \$300 million from 2023.

03 Median Price per Square Foot & Price by Quarter | Manhattan

Median Price per Square Foot by Quarter

In Q3 2024, the median price per square foot for signed contracts rose to \$2,182, a 6% increase from the previous year and the highest since Q4 2021. However, since only 24% of these contracts have closed, this figure is likely to decline as sales are recorded.

Median Price by Quarter

The median price of signed contracts in Q3 2024 held steady year-over-year to \$2.4 million, with sales below \$3 million accounting for 62% of all contracts signed in the quarter.

04 Unsold Inventory by Quarter | Manhattan

Unsold Inventory by Quarter | Number

Manhattan’s unsold new development inventory declined by 6% year-over-year, ending Q3 with 4,574 unsold units. The unsold inventory remained stable compared to the first half of 2024, with inventory declining by 2% from Q1 2024. Nearly 40% of these unsold units are from projects launched before the pandemic.

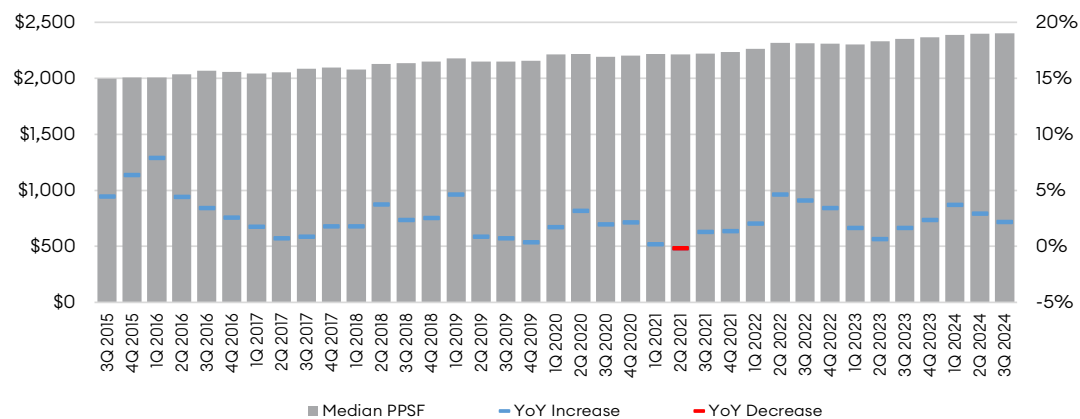

Unsold Inventory by Quarter | Median PPSF

The price per square foot of unsold inventory increased by 2% in Q3 2024, reaching \$2,402, the highest median price per square foot for unsold units, creating a 9% gap between the median price per square foot of sold and unsold inventory.

05 Years of Supply by Quarter | Manhattan

Unsold Inventory vs. Rolling Last Twelve Months (RLTM) Contracts Signed

At the close of Q3 2024, Manhattan’s new development inventory included 4,574 unsold units. Evaluating contract activity over the past twelve months, the supply metric for Manhattan’s new development market stands at 3.1 years. This figure has remained relatively constant for the past eight quarters, indicating a balanced market between sales and inventory.

06 Contracts Signed & Unsold Inventory by Type & Price | Manhattan

Contracts Signed | Unit Type & Price

Over the past four quarters, there has been a strong demand for smaller and more affordable residences, making up most units sold. Specifically, two-bedroom or smaller units accounted for 69% of all signed contracts, with sales below \$4 million constituting 72% of the market. The sales trends in Q3 reflect those of the preceding quarters, except for two price segments. Notably, Q3 saw nine sales above \$20 million compared to six in Q2, with 32 total sales above \$10 million compared to 20 sales above \$10 million in the second quarter of 2024.

One-bedroom units priced between \$1 million and \$2 million and two-bedroom units in the \$2 million to \$3 million range exhibit favorable supply and demand dynamics. Conversely, there is an oversupply of one-bedroom units priced between \$3 million and \$4 million and over 460 unsold two-bedroom units priced between \$3 million and \$5 million, highlighting potential market imbalances and emphasizing the need for strategic pricing adjustments.

07 Contracts Signed & Unsold Inventory | by Submarket

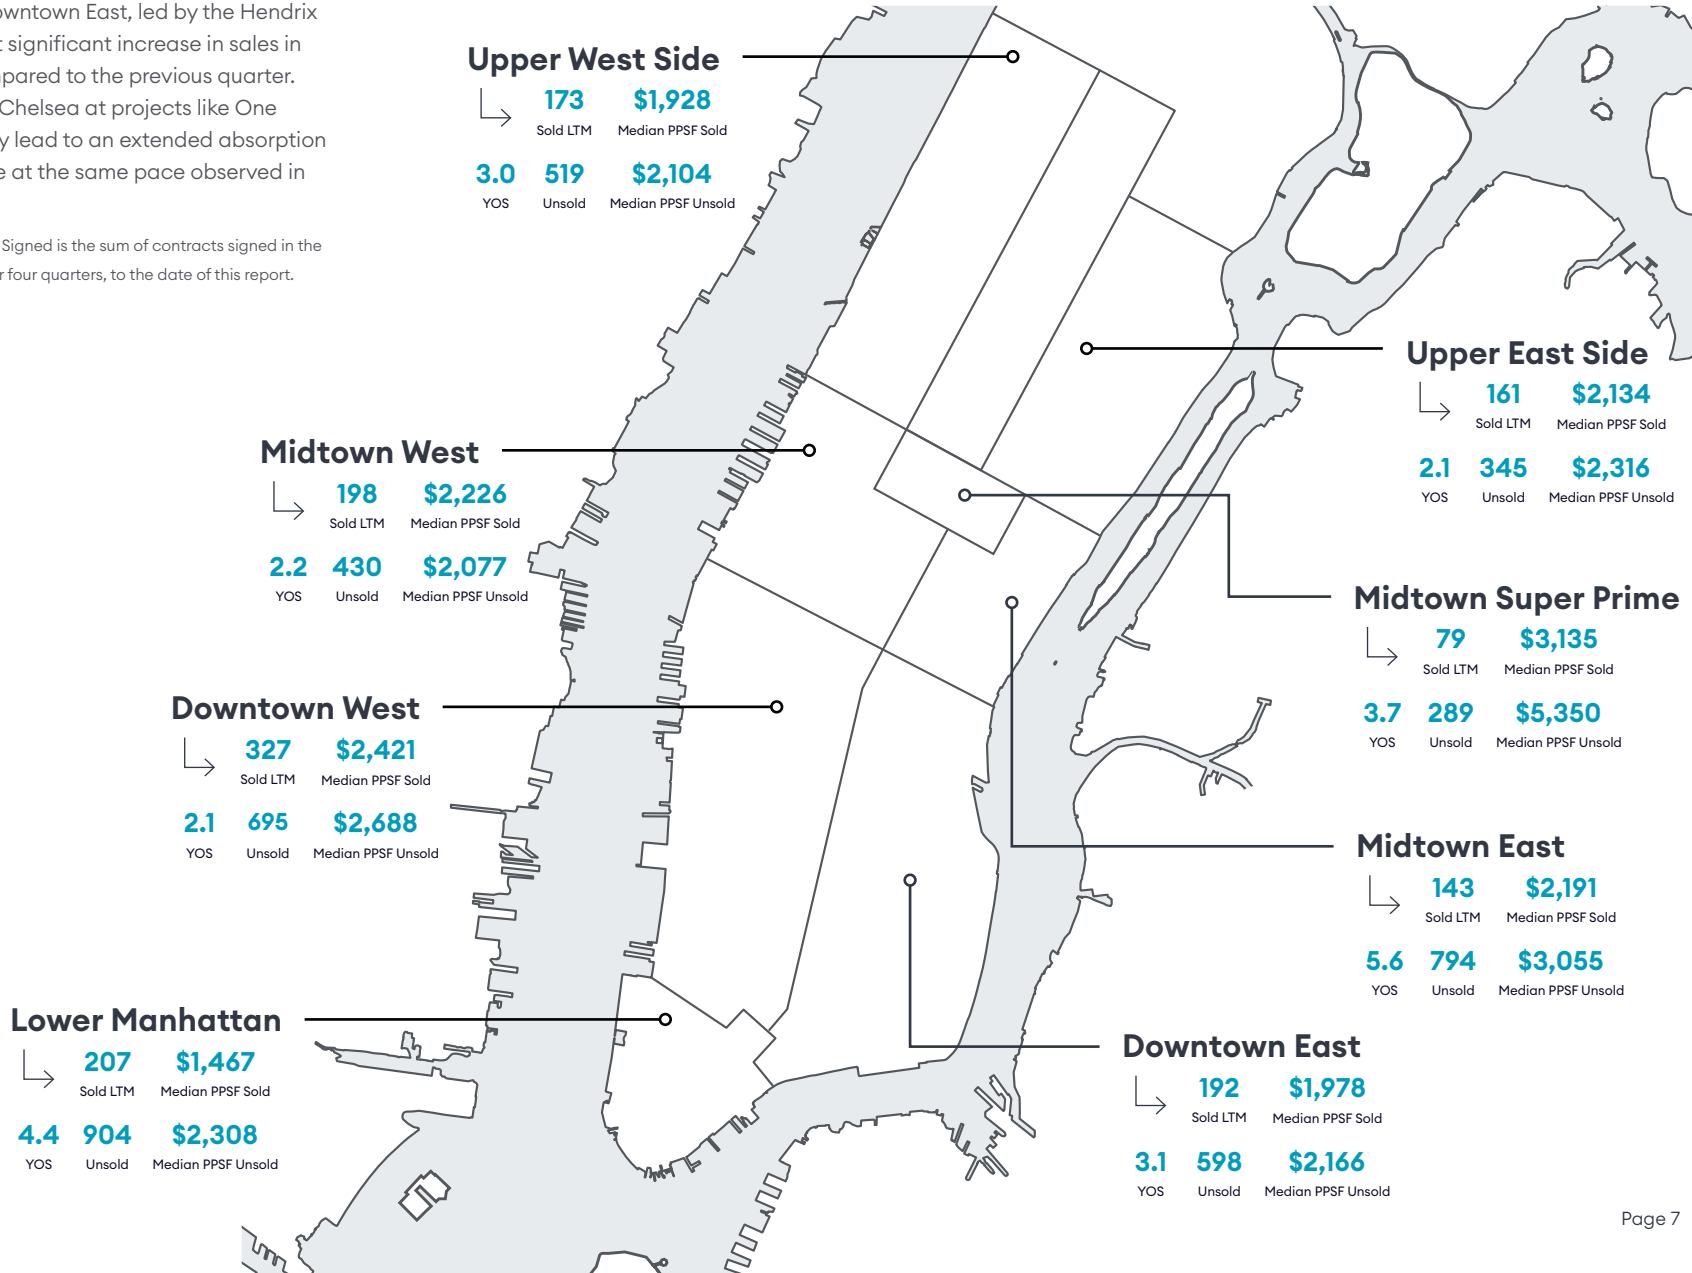

RLTM Contracts Signed & Unsold Inventory

Demand for Downtown projects remains robust but has weakened, specifically in neighborhoods like West Chelsea and Nomad, compared to previous quarters. Sales below 34th Street accounted for 45% of contracts signed in Q3 2024 and 49% over the past twelve months. Downtown East, led by the Hendrix House in Kips Bay, saw the most significant increase in sales in Q3 2024, with sales tripling compared to the previous quarter. Conversely, fewer sales in West Chelsea at projects like One High Line and The Cortland may lead to an extended absorption period if these projects continue at the same pace observed in Q3.

Note: Last Twelve Months (LTM) Contracts Signed is the sum of contracts signed in the immediately preceding 12 month period, or four quarters, to the date of this report.

- Downtown East: East Village | Gramercy Park | Kips Bay | Lower East Side
- Lower Manhattan: Battery Park City | Financial District

08 Historical Launches & Pipeline | Manhattan

Units Launched For Sales | Pipeline

In Q3 2024, 371 new units were introduced for sale across ten new developments, with 609 Second Avenue and 255 East 77th Street, each launching with more than 60 units. This brings the total number of new units launched in 2024 to 1,097, a 17% increase from the previous year. We anticipate a slowdown in new launches in the last quarter of 2024, resulting in less than 1,200 new units coming to market this year. We expect 2025 will be pretty comparable to 2024, but beyond 2025, projections remain cloudy. As previously noted, launch strategies have evolved, with many developments choosing to debut closer to occupancy. We expect most projects will continue to launch sales less than a year before occupancy. However, some notable larger-scale projects will likely buck this trend and launch further from closings.

Historical Launches & Forecasted Pipeline

Year	# Units				# Projects	Avg. # Months
	Launched	Forecasted	Total	YoY		
2009	475	-	475	-	20	13

Historical & Forecasted Units Launched for Sales

09 Methodology & Disclaimers

Methodology

- Data in this report includes sponsor units only in Manhattan south of 96th Street on the Upper East Side, and south of 110th Street on the Upper West Side.
- Data as of October 1, 2024.
- Source: Douglas Elliman Proprietary Databases, ACRIS, StreetEasy, NY State Attorney General, and other public sources.
- Unsold Inventory is defined as Schedule A units not sold, plus potentially signed contracts not publicly reported. 220 Central Park South is excluded from inventory figures.
- Rolling Last Twelve Months (RLTM) Contracts Signed is defined as the sum of contracts signed in the immediately preceding 12 month period, or four quarters, to the date of this report.
- Contract signed prices may not take into account any variety of concessions or taxes. Units sold below market rate are included in contracts signed totals but excluded from price calculations.
- Some new developments in sales do not disclose all individual contract signed activity, and therefore contract signed data included in this report may be partial or estimated. Once units close, past quarters' data is revised to reflect actual historical sales.
