Market in a Minute

A SUMMARY OF MARKET CONDITIONS FOR JUNE 2025

CONTRACTS

Contract activity in June 2025 was **up 12.0%** from last June and was up for five price categories. Through the first six months of the year, contract activity is down just 0.5%. The average number of days on the market for homes receiving contracts was 37 days in June 2025, up from 34 days last June.

URGENCY INDEX

The Urgency Index, simply the percentage of homes going under contract that were on the market 30 days or less, was down in June 2025 compared to last June. During the past 12 years, the Index has been as high as 92.8% (April 2022) and as low as 29.2% (December 2013). In June 2025, the Urgency Index was **66.4%**, down from 70.9% in June 2024.

INVENTORY

The number of homes on the market at the end of June (845) was **up 22.8%** compared to the end of June 2024 and was up for five price categories. The number of new listings coming on the market **increased 5.6%** compared to June 2024. The increase in contract activity was not enough to offset the increase in inventory raising overall supply to **1.9 months** from 1.7 months at the end of June 2024. To provide some context, during the "Great Recession" in June 2007, supply was **14 months**, the average days on market was **101**, and there were. almost **3,800** homes on the market, **more than 4 times as many as today.**

INTEREST RATES

30-year fixed mortgage interest rates at the end of June stood at 6.67%, down from 6.89% at the end of May 2025, and down from 6.95% one year ago. Given the enormous variations in the impact of daily national and global economic news – good and bad – it is remarkable how small the movement in mortgage rates has been. All eyes are now on the Fed to see how many, **if any**, rate cuts they will do this year.

AFFORDABILITY

The payment on a no-money-down, 30-year fixed mortgage for a median-priced home is **157% higher** than it was a decade ago in June 2015, and the median price is up **93%**. The payment is 4% higher than last June because of a higher median price. The mortgage payment for a median priced home (\$3,032) was **higher** in June than the median rented price (\$2,100).

DIRECTION OF THE MARKET

The Virginia Countryside real estate market remains strong – yet the signs of softening are unmistakable **and** expected. We have seen a sustained, seller's market for well over a decade, driven by very low interest rates and almost non-existent inventory. Buyers rushed to take advantage of those low rates, and they were often in competition with other buyers who were doing the same thing. Home prices skyrocketed. Would-be buyers were frustrated. Yet markets **always** change. Over the last year, there has been steady change to that seller's market. Mortgage rates rose. Contract activity remained relatively flat while the biggest change was a significant rise on the number of available homes. There are almost 60% more homes on the market today than just one year ago. Buyers simply have more choices, and the impact is undeniable. The average days on market has climbed by 10%, absorption rates and the urgency index have fallen, and the pace of home price appreciation has slowed considerably. In general homes are not selling as close to list price.

Overall supply is up 10%. There is enormous uncertainly about the economy, and lots of international tension and conflict. Yet despite all of this, it is still a seller's market in the Virginia Countryside. There is less than 2 months of inventory on the market, and that's still very tight when viewed from any historical perspective. And inventory is still more than 30% lower than pre-COVID levels. We fully expect that the market will continue to tilt – slightly – in favor of sellers, but only those who understand the shifting dynamics and price to reflect those changes.

Unless otherwise noted, data derived from BrightMLS. "Northern Virginia" is defined as Arlington and Fairfax counties and the cities of Alexandria, Falls Church & Fairfax. VA Countryside includes Clarke, Fauquier, Frederick, Shenandoah, and Warren counties and the city of Winchester.

Absorption Rate by Property Type

The following tables track absorption rate by property type, comparing the rates in the just-completed month to the rates in the same month of the previous year. The absorption rate is a measure of the health of the market and tracks the percentage of homes that were on the market during the given month and in the given price range that went under contract. [The formula is # Contracts/ (# Contracts + # Available).] An example: The absorption rate for attached homes priced between \$300,000 and \$499,999 in June 2025 was 37.5%. That compares to a rate of 37.0% in June 2024, and the increase means the market was better in 2025 for that type of home. If the absorption rate was less in 2025 than in 2024, we have put the 2025 rate in red. This month there was improvement for four price categories.
