To: Leslie Waltz

For: 210 Wild Ceader Pl, Simpsonville, Sc 29681

As requested by you, the septic tank at this address was pumped and inspected by American Waste Septic Tank Service. This system appears to be physically in working order. There was no indication of any drain field problems or other problems at the time of this visual inspection.

The tank is a 1000 gallon tank. Every thing looks good.

This system should continue to provide good service if properly maintained and should not cause an unsanitary condition. **No warranty is granted nor implied by this statement.**

Septic Tank pump outs should be considered routine maintenance and continued on a regular schedule. The SC Department of Health and Environmental Control suggest pumping them every three to five years unless you use a garbage disposal. In that case they suggest every one to two years.

Sincerely,

Timothy Howard
