June 2026 Housing Market Report

Select macro-economic and demographic data for the country and the Bay Area – June 2026

June 9 2026

The Bay Area housing market hit a lot of national headlines in May. In San Francisco, AI and tech-driven demand has created aggressive bidding wars on the scarce inventory. Skyrocketing rents are back in the norm. Even the city's condo market, which has been under pressure for six years, is showing signs of demand recovery.

For the first time in many years job creation in the Bay Area is positive and economic opportunity is attracting net inbound migration, despite the region's chronic shortage of homes and affordability issues. It's notable that other tech cities like Seattle and Austin are not seeing the boom in the real estate market related to AI. In fact, those cities are now sending more people to San Francisco than the reverse.

While the city dominates the headlines, many areas have not seen the massive wealth effect driving home buying demand like the city has. In this cycle, this resurgent demand is so far concentrated to a very small section in the city, and luxury markets in Peninsula and Marin.

For much of the region, interest rates matter more than stock market performance. In May, mortgage rates jumped higher with sharply higher inflation data. That tension between higher interest rates and the wealth effect is likely to continue for the rest of 2026. Inflation pressures have been pushing higher, and it seems unlikely that interest rates will dip again very soon.

Mortgage Rates Bounce Off the Lows

Interest rates have pushed higher due to war news, overheated inflation, and recently strong jobs data. Still at the low-end of the range over the past three years, any push into the upper 6s is likely to slow home purchase demand abruptly. Our forecast is for mortgage rates to average 6.4% for the year.

San Francisco faces a chronic shortage of homes so as employment increases rents drive higher quickly. The South Bay is second nationally to San Francisco in rent appreciation over the last 12 months.

Inflation is High and Pushing Higher

For much of the last decade, Bay Area housing and services like education and childcare pushed local inflation above national averages. For a brief moment in 2023-2025, housing costs in the Bay Area kept inflation lower than the rest of the US. In 2026 surging inflation nationally is driving interest rates higher.

National Employment Grew in May

The labor market shows three months of growth after a very weak 2025. Corporate profitability is improving, AI investment is booming, and government spending is unabated, all of which are drivers of continued expansion in 2026. An improving labor market is generally positive for housing.

Bay Area Jobs Are Growing Again

After 5 years of shrinking employment and out-migration, Bay Area companies are adding jobs again. This is evident in housing demand which turned around mid-2025 in San Francisco, with rising rents and home prices.

Stocks Surge to New Highs In May

After war, oil, and inflation fears pushed markets lower in March, April and May stock market resurgence creates a powerful "wealth effect" for potential homebuyers. This is especially true in the Bay Area with AI related market boom and IPOs in the pipeline.

Bay Area Migration Sources & Destinations

In 2025, inbound migration to the Bay Area resumed for the first time in many years. Seattle and Austin are net inbound to San Francisco. Lower cost of living cities remain popular destinations for outbound movers.

COMPASS INTERNATIONAL HOLDINGS

Low Unemployment Keeps People in Homes

Headline Unemployment (U3) has moved lower since November. In normal housing cycles, rising unemployment creates distressed seller inventory. Unemployment has remained low this cycle, which is one reason for less inventory and fewer home sales. Job creation and the hiring rate are more important drivers of the housing market in 2026.

Very Few Foreclosures in 2026

Due to high equity, low locked-in mortgage rates, and low unemployment, foreclosures are likely to stay low for 2026

Expensive and Cheap Mortgages

More mortgages now carry a 6-plus% rate than under 3%. Homeowners with very cheap mortgage payments are reluctant to ever sell, so inventory remains tight and sales are fewer than normal. Over time, fewer homeowners are locked-in to ultra low rates and home sales grow.

■ <3% Interest Rate ■ 3-4% ■ 4-5% ■ 5-6% ■ >6% Rate

Home Price Changes Over Time

Recent appreciation trends in Monterey County suggest a relatively balanced market, with home values showing limited long-term momentum in either direction
