423	<b>FLOOD RISK</b>			
424	Flood risks in New Jersey are growing due to the effects of climate change. Coastal and inland areas may experience significant flooding			
425	now and in the near future, including in places that were not previously known to flood. For example, by 2050, it is likely that sea-level			
426	rise will meet or exceed 2.1 feet above 2000 levels, placing over 40,000 New Jersey properties at risk of permanent coastal flooding.			
427	In addition, precipitation intensity in New Jersey is increasing at levels significantly above historic trends, placing inland properties at			
428	greater risk of flash flooding. These and other coastal and inland flood risks are expected to increase within the life of a typical mortgage			
429	originated in or after 2020.			
430
