

BROOKLYN<br>SALES REPORT<br>Q2 2019:

## SPRING

COMEBACK

Brooklyn proved to be an exciting market in the second quarter of 2019 after a slow start to the year.

Taking a glimpse at the overall market, sales jumped 9\% compared to this time last year, with a notable amount of activity in June. Listings were fast to sell, but only in the first 59 days. After reaching that threshold, properties tended to stagnate, with the fewest number of sales happening between 60 and 179 days. This stalling motivated many sellers and led to the highest market-wide discount seen in eight years.

The \$2M-3M price point is a perfect example of these trends. $41 \%$ of transactions happened in less than 60 days, but $35 \%$ took more than 180 days. Sellers in this range were clearly motivated to move their listings, as the average discount hit $9 \%$, the highest of any submarket. Though only $7 \%$ of transactions, it's evident from our quarterly data and weekly Brooklyn luxury reports that listings priced \$2M and up are a lively market.

North Brooklyn opposed the overall trends and was a vastly different submarket this
quarter, in major part due to significantly larger properties on average. This area held firm in price per square foot and sellers were more reluctant with discounts.

As we begin summer, expect discounts to start receeding. With an increased number of buyers and uptick in market activity, sellers will be less likely to negotiate or drop their price, even if their listings linger longer than expected.

## METHODOLOGY

GEOGRAPHY covered in this report is Brooklyn.

INVENTORY is calculated based on all properties actively listed during the quarter at the time the report is prepared.

CONTRACT SIGNED figures for the current quarter are based on publicly reported transactions at the time the report is prepared. The signed price reflects the latest available asking price.

RECORDED SALES figures for the current quarter are based on known closings recorded at the time the report is prepared.

MEDIAN PRICE is the middle price of a given dataset.

AVERAGE PRICE is the sum of all prices divided by the total number of properties.

MONTHS OF SUPPLY is an estimated time it would take to sell all current active listings based on the trailing 12-months sales rate.

TIME ON MARKET is calculated by how many properties entered contract during the quarter in the given period.

DISCOUNT is the percentage difference between the initial list and recorded sale price.

CURRENT QUARTER is reflective of the initial day of the quarter until the 20th day of the closing month of the quarter. These numbers will be updated in subsequent reports to reflect the dataset of the entire quarter.
