Cabinet Construction Details

Door Style: Euro - Phenolic Resin

WHY PVC...

Polyvinyl Chloride, or PVC, is a man-made polymer that has seen use in a multitude of applications from food to medicine, indoor to outdoors. In the cabinet industry, it's a groundbreaking method of weatherproof construction. PVC is a robust yet light-weight plastic with excellent properties for use outdoors and with cooking appliances.

Our cabinet and drawer boxes are built from 100% waterproof PVC which is assembled using a weld-like bonding process that creates the strongest cabinet box on the market. As shown, we offer white or black PVC cabinetry that is light weight and easy to clean by simply spraying it with a hose and wiping it dry. The combination of durability and esthetic beauty makes **NatureKast** one of the best values in the outdoor living market.

WHAT IS RESIN...

Resin is another type of polymer that we employ in the creation of our cabinetry. Think of it like a light-weight foam that's injected into a die, pressed down with considerable force, compressing the cell-like structure of the foam into something very dense and very strong. The combination of Resin with PVC provides stellar results against the elements.

We can also style the inside of the die to look like real wood and, once finished, have a beautiful, realistic product as shown to the right. All **NatureKast** doors, drawer fronts, panels and planks are all created from molds cast from real distressed Cypress wood to give an amazing natural grain detail.

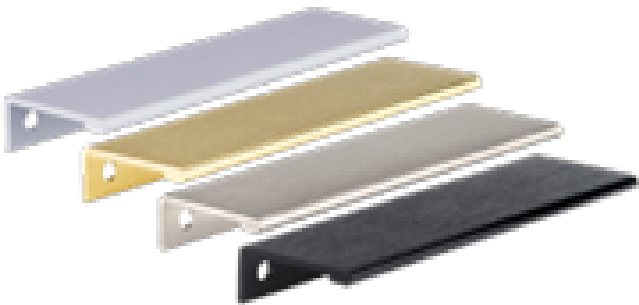

Work with NatureKast
just like regular wood...

Finish: Budapest Black Walnut

Hardware:
8-11/32" Modern Aluminum Edge Pull -
Brushed Stainless
